## §219.9 Regional guide content.

- (a) The regional guide shall contain-
- (1) A summary of the analysis of the regional management situation, including a brief description of the existing management situation and the major issues and management concerns which need to be addressed at the regional level to facilitate forest planning;
- (2) A description of management direction including programs, goals, and objectives;
- (3) A display of tentative resource objectives for each forest planning area from the current RPA Program;
- (4) New or significantly changed regional management standards and guidelines necessary to address major regional issues and management concerns identified in paragraph (a)(1) of this section;
- (5) Specific standards and guidelines for the following—
- (i) Prescribing appropriate harvest cutting methods to be used within the region according to geographic areas, forest types, or other suitable classifications:
- (ii) Establishing the maximum size, dispersal, and size variation of tree openings created by even-aged management, and the state of vegetation that will be reached before a cut-over area is no longer considered an opening, using factors enumerated in §219.27(d);
- (iii) Defining the management intensities and utilization standards to be used in determining harvest levels for the region:
- (iv) Designating transportation corridors and associated direction for forest planning, such as management requirements for corridors, transmission lines, pipelines, and water canals. (The designation of corridors is not to preclude the granting of separate rights-of-way over, upon, under, or through the Federal lands where the authorized line officer determines that confinement to a corridor is not appropriate.) (43 U.S.C. 1763, 36 CFR 251.56); and
- (v) Identifying in forest plans significant current and potential air pollution emissions from management activities and from other sources in and around the forest planning area and identifying measures needed to coordi-

nate air quality control with appropriate air quality regulation agencies.

- (6) A description of the monitoring and evaluation necessary to determine and report achievements and effects of the guide.
- (7) A description of measures to achieve coordination of National Forest System, State and Private Forestry, and Research programs.
- (b) Existing regional standards and guidelines that are part of the Forest Service directives system, and that are not altered or superseded in the course of complying with §219.9(a)(4), shall remain in effect.

## §219.10 Forest planning—general procedure.

- (a) Responsibilities—(1) Regional Forester. The Regional Forester shall establish regional policy for forest planning and approve all forest plans in the region.
- (2) Forest Supervisor. The Forest Supervisor has overall responsibility for the preparation and implementation of the forest plan and preparation of the environmental impact statement for the forest plan. The Forest Supervisor appoints and supervises the interdisciplinary team.
- (3) Interdisciplinary team. The team, under the direction of the Forest Supervisor, implements the public participation and coordination activities required by §219.6 and §219.7. The team shall continue to function even though membership may change and shall monitor and evaluate planning results and recommend revisions and amendments. The interdisciplinary team shall develop a forest plan and environmental impact statement using the process established in §219.12 and paragraph (b) below.
- (b) Public review of plan and environmental impact statement. A draft and final environmental impact statement shall be prepared for the proposed plan according to NEPA procedures. The draft environmental impact statement shall identify a preferred alternative. To comply with 16 U.S.C. 1604(d), the draft environmental impact statement and proposed plan shall be available for public comment for at least 3 months, at convenient locations in the vicinity

§ 219.10

of the lands covered by the plan, beginning on the date of the publication of the notice of availability in the FED-ERAL REGISTER. During this period, and in accordance with the provisions in §219.6, the Forest Supervisor shall publicize and hold public participation activities as deemed necessary to obtain adequate public input.

(c) Plan approval. The Regional Forester shall review the proposed plan and the final environmental impact statement and either approve or dis-

approve the plan.

- (1) Approval. The Regional Forester shall prepare a concise public record of decision which documents approval and accompanies the plan and final environmental impact statement. record of decision shall be prepared according to NEPA procedures (40 CFR 1505.2). The approved plan shall not become effective until at least 30 days after publication of the notice of availability of the final environmental impact statement in the FEDERAL REG-ISTER, to comply with 16 U.S.C. 1604(d)and 1604(j).
- (2) Disapproval. The Regional Forester shall return the plan and final environmental impact statement to the Forest Supervisor with a written statement of the reasons for disapproval. The Regional Forester may also specify a course of action to be undertaken by the Forest Supervisor in order to remedy deficiencies, errors, or omissions in the plan or environmental impact statement.
- (d) Public appeal of approval decision. The provisions of 36 CFR part 211, subpart B apply to any administrative appeal of the Regional Forester's decision to approve a forest plan. Decisions to disapprove a plan and other decisions made during the forest planning process prior to the issuance of a record of decision approving the plan are not subject to administrative appeal.
- (e) Plan implementation. As soon as practicable after approval of the plan, the Forest Supervisor shall ensure that, subject to valid existing rights, all outstanding and future permits, contracts, cooperative agreements, and other instruments for occupancy and use of affected lands are consistent with the plan. Subsequent administrative activities affecting such lands, in-

cluding budget proposals, shall be based on the plan. The Forest Supervisor may change proposed implementation schedules to reflect differences between proposed annual budgets and appropriated funds. Such scheduled changes shall be considered an amendment to the forest plan, but shall not be considered a significant amendment, or require the preparation of an environmental impact statement, unless the changes significantly alter the long-term relationship between levels of multiple-use goods and services projected under planned budget proposals as compared to those projected under actual appropriations.

(f) Amendment. The Forest Supervisor may amend the forest plan. Based on an analysis of the objectives, guidelines, and other contents of the forest plan, the Forest Supervisor shall determine whether a proposed amendment would result in a significant change in the plan. If the change resulting from the proposed amendment is determined to be significant, the Forest Supervisor shall follow the same procedure as that required for development and approval of a forest plan. If the change resulting from the amendment is determined not to be significant for the purposes of the planning process, the Forest Supervisor may implement the amendment following appropriate public notification and satisfactory completion of

NEPA procedures.

(g) Revision. A forest plan shall ordinarily be revised on a 10-year cycle or at least every 15 years. It also may be revised whenever the Forest Supervisor determines that conditions or demands in the area covered by the plan have changed significantly or when changes in RPA policies, goals, or objectives would have a significant effect on forest level programs. In the monitoring and evaluation process, the interdisciplinary team may recommend a revision of the forest plan at any time. Revisions are not effective until considered and approved in accordance with the requirements for the development and approval of a forest plan. The Forest Supervisor shall review the conditions on the land covered by the plan at least every 5 years to determine whether conditions or demands of the public have change significantly.

(h) Planning records. The Forest Supervisor and interdisciplinary team shall develop and maintain planning records that document the decisions and activities that result from the process of developing a forest plan. Records that support analytical conclusions made and alternatives considered by the team and approved by the Forest Supervisor throughout the planning process shall be maintained. Such supporting records provide the basis for the development of the forest plan and associated documents required by NEPA procedures.

## §219.11 Forest plan content.

The forest plan shall contain the following:

(a) A brief summary of the analysis of the management situation, including demand and supply conditions for resource commodities and services, production potentials, and use and development opportunities;

(b) Forest multiple-use goals and objectives that include a description of the desired future condition of the forest or grassland and an identification of the quantities of goods and services that are expected to be produced or provided during the RPA planning periods:

(c) Multiple-use prescriptions and associated standards and guidelines for each management area including proposed and probable management practices such as the planned timber sale program; and

(d) Monitoring and evaluation requirements that will provide a basis for a periodic determination and evaluation of the effects of management practices.

## §219.12 Forest planning—process.

(a) General requirements. The preparation, revision, or significant amendment of a forest plan shall comply with the requirements established in this section. The planning process includes at least those actions set forth in paragraphs (b) through (k) of the section. Some actions may occur simultaneously, and it may be necessary to repeat an action as additional information becomes available. The environmental impact statement for each forest plan shall be prepared according to

NEPA procedures. To the extent feasible, a single process shall be used to meet planning and NEPA requirements.

(b) Identification of purpose and need. The interdisciplinary team shall identify and evaluate public issues, management concerns, and resource use and development opportunities, including those identified throughout the planning process during public participation activities and coordination with other Federal agencies, State and local governments, and Indian tribes. The Forest Supervisor shall determine the major public issues, management concerns, and resource use and development opportunities to be addressed in the planning process.

(c) Planning criteria. Criteria shall be prepared to guide the planning process. Criteria apply to collection and use of inventory data and information, analysis of the management situation, and the design, formulation, and evaluation of alternatives. Criteria designed to achieve the objective of maximizing net public benefits shall be included. Specific criteria may be derived from—

- (1) Laws, Executive Orders, regulations, and agency policy as set forth in the Forest Service Manual;
- (2) Goals and objectives in the RPA Program and regional guides;
- (3) Recommendations and assumptions developed from public issues, management concerns, and resource use and development opportunities;
- (4) The plans and programs of other Federal agencies, State and local governments, and Indian tribes;
- (5) Ecological, technical, and economic factors; and
- (6) The resource integration and management requirements in §§ 219.13 through 219.27.
- (d) *Inventory data and information collection.* Each Forest Supervisor shall obtain and keep current inventory data appropriate for planning and managing the resources under his or her administrative jurisdiction. The Supervisor will assure that the interdisciplinary team has access to the best available data. This may require that special inventories or studies be prepared. The interdisciplinary team shall collect, assemble, and use data, maps, graphic material, and explanatory aids, of a
